This comprehensive guide will help you identify and treat common garden problems, so you can enjoy a beautiful, healthy garden all season long.

Pests

Pests are organisms that feed on or damage plants. They can be insects, rodents, birds, or other animals.

Some of the most common garden pests include:

- Aphids

- Spider mites
- Whiteflies
- Mealybugs
- Scale insects
- Thrips
- Slugs
- Snails
- Deer
- Rabbits

Pests can cause a variety of damage to plants, including:

- Feeding on leaves, stems, or roots
- Sucking sap from leaves
- Boring into stems or fruit
- Transmitting diseases

To control pests, you can use a variety of methods, including:

- Physical control: This involves using physical barriers, such as netting or fencing, to keep pests away from your plants.
- Biological control: This involves using natural predators or parasites to control pests.
- Chemical control: This involves using pesticides to kill or repel pests.

Diseases

Diseases are caused by pathogens, such as bacteria, fungi, or viruses. They can affect any part of the plant, from the roots to the leaves.

Some of the most common garden diseases include:

- Powdery mildew
- Downy mildew
- Rust
